KEY DEADLINES

Extended to: **30 June 2012**
Submission of **contributed papers** including Forms A and B through one of the official channels (see conference web site for further details) to the IAEA.
Advance copy to: radprom2012.papers@iaea.org

Extended to: **30 June 2012**
Submission of **grant applications** Forms A and C through one of the official channels (see conference web site for further details) to the IAEA.

Persons interested in participating in the conference but not submitting a contributed paper must nevertheless submit **Participation Form A** through one of the official channels as soon as possible (see conference web site for further details).

REGISTRATION

No registration fee is charged.

LANGUAGE

The conference will be held in English.

Please include reference number CN-192 in all communications.
BACKGROUND
Radiation in medicine involves the deliberate and direct exposure of humans to ionizing radiation. There is a strong and continuing need to protect patients from unnecessary and unintended exposure, and also to protect medical staff from high doses incurred.

The conference will deal with aspects of radiation protection related to the use of ionizing radiation and radioactive substances in medicine.

OBJECTIVES OF THE CONFERENCE
- To indicate gaps in current approaches to radiation protection in medicine;
- To identify tools for improving radiation protection in medicine;
- To review advances, challenges and opportunities in the field of radiation protection in medicine;
- To assess the impact of the International Action Plan for the Radiation Protection of Patients, in order to prepare new international recommendations, taking into account newer developments.

TOPICS AND PAPERS
The IAEA welcomes high quality contributions on all aspects of radiation protection in medicine. Both academic and practice based papers that come under the umbrella of the following subjects:
- Diagnostic imaging and optimization;
- Diagnostic imaging and justification;
- Radiation protection of patients in interventional procedures;
- Occupational radiation protection of medical workers;
- Protecting patients, carers and comforters and the public in nuclear medicine;
- Patient protection in radiotherapy;
- Radiation protection of patients in other medical modalities;
- Medical issues related to radiation accidents;
- Safety education and training;
- Patients’ viewpoint on safety and protection;
- Issues around radiological health screening;
- Radiation protection of children and pregnant women;
- Manufacturers’ role in protecting patients;
- Topics for future research and development.

Papers will be summarized by a rapporteur (see “Programme Structure”) and distributed in a compiled electronic format free of charge to participants. Authors of contributed papers may also, if they so wish, present the substance of their papers in the form of posters.

PROGRAMME STRUCTURE
Topical Sessions will cover selected areas of radiation protection in medicine:
- Invited presentations;
- Summary of session-related contributed papers presented by a rapporteur;
- Plenary discussions involving the audience.

Round Table Sessions will be dedicated to identifying recommendations for future actions:
- Brief statements delivered by panel members;
- Summary of session related contributed papers presented by a rapporteur;
- Round table and plenary discussions involving the audience.

AUDIENCE
The conference is directed at a wide audience with an interest in radiation protection in medicine. In particular:
- Health professionals, e.g. physicians practising in radiological imaging, nuclear medicine and radiotherapy; referring medical practitioners;
- Medical physicists, radiographers and technologists; radiation protection professionals and engineers;
- Healthcare managers, health economists and risk communication experts;
- Representatives of patient organizations and manufacturers; health researchers and academicians;
- Representatives of health authorities and regulatory authorities with a special responsibility in this field.
