IAEA Safety Standards
for protecting people and the environment

Specific Safety Guide
No. SSG-33
IAEA SAFETY STANDARDS AND RELATED PUBLICATIONS

IAEA SAFETY STANDARDS

Under the terms of Article III of its Statute, the IAEA is authorized to establish or adopt standards of safety for protection of health and minimization of danger to life and property, and to provide for the application of these standards.

The publications by means of which the IAEA establishes standards are issued in the IAEA Safety Standards Series. This series covers nuclear safety, radiation safety, transport safety and waste safety. The publication categories in the series are Safety Fundamentals, Safety Requirements and Safety Guides.

Information on the IAEA’s safety standards programme is available on the IAEA Internet site

http://www-ns.iaea.org/standards/

The site provides the texts in English of published and draft safety standards. The texts of safety standards issued in Arabic, Chinese, French, Russian and Spanish, the IAEA Safety Glossary and a status report for safety standards under development are also available. For further information, please contact the IAEA at: Vienna International Centre, PO Box 100, 1400 Vienna, Austria.

All users of IAEA safety standards are invited to inform the IAEA of experience in their use (e.g. as a basis for national regulations, for safety reviews and for training courses) for the purpose of ensuring that they continue to meet users’ needs. Information may be provided via the IAEA Internet site or by post, as above, or by email to Official.Mail@iaea.org.

RELATED PUBLICATIONS

The IAEA provides for the application of the standards and, under the terms of Articles III and VIII.C of its Statute, makes available and fosters the exchange of information relating to peaceful nuclear activities and serves as an intermediary among its Member States for this purpose.

Reports on safety in nuclear activities are issued as Safety Reports, which provide practical examples and detailed methods that can be used in support of the safety standards.

Other safety related IAEA publications are issued as Emergency Preparedness and Response publications, Radiological Assessment Reports, the International Nuclear Safety Group’s INSAG Reports, Technical Reports and TECDOCs. The IAEA also issues reports on radiological accidents, training manuals and practical manuals, and other special safety related publications.

Security related publications are issued in the IAEA Nuclear Security Series.

The IAEA Nuclear Energy Series comprises informational publications to encourage and assist research on, and the development and practical application of, nuclear energy for peaceful purposes. It includes reports and guides on the status of and advances in technology, and on experience, good practices and practical examples in the areas of nuclear power, the nuclear fuel cycle, radioactive waste management and decommissioning.

The Agency’s Statute was approved on 23 October 1956 by the Conference on the Statute of the IAEA held at United Nations Headquarters, New York; it entered into force on 29 July 1957. The Headquarters of the Agency are situated in Vienna. Its principal objective is “to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world”.

IAEAL 15–00953
FOREWORD

by Yukiya Amano
Director General

The IAEA’s Statute authorizes the Agency to “establish or adopt… standards of safety for protection of health and minimization of danger to life and property” — standards that the IAEA must use in its own operations, and which States can apply by means of their regulatory provisions for nuclear and radiation safety. The IAEA does this in consultation with the competent organs of the United Nations and with the specialized agencies concerned. A comprehensive set of high quality standards under regular review is a key element of a stable and sustainable global safety regime, as is the IAEA’s assistance in their application.

The IAEA commenced its safety standards programme in 1958. The emphasis placed on quality, fitness for purpose and continuous improvement has led to the widespread use of the IAEA standards throughout the world. The Safety Standards Series now includes unified Fundamental Safety Principles, which represent an international consensus on what must constitute a high level of protection and safety. With the strong support of the Commission on Safety Standards, the IAEA is working to promote the global acceptance and use of its standards.

Standards are only effective if they are properly applied in practice. The IAEA’s safety services encompass design, siting and engineering safety, operational safety, radiation safety, safe transport of radioactive material and safe management of radioactive waste, as well as governmental organization, regulatory matters and safety culture in organizations. These safety services assist Member States in the application of the standards and enable valuable experience and insights to be shared.

Regulating safety is a national responsibility, and many States have decided to adopt the IAEA’s standards for use in their national regulations. For parties to the various international safety conventions, IAEA standards provide a consistent, reliable means of ensuring the effective fulfilment of obligations under the conventions. The standards are also applied by regulatory bodies and operators around the world to enhance safety in nuclear power generation and in nuclear applications in medicine, industry, agriculture and research.

Safety is not an end in itself but a prerequisite for the purpose of the protection of people in all States and of the environment — now and in the future. The risks associated with ionizing radiation must be assessed and controlled without unduly limiting the contribution of nuclear energy to equitable and sustainable development. Governments, regulatory bodies and operators everywhere must ensure that nuclear material and radiation sources are used beneficially, safely and ethically. The IAEA safety standards are designed to facilitate this, and I encourage all Member States to make use of them.
THE IAEA SAFETY STANDARDS

BACKGROUND

Radioactivity is a natural phenomenon and natural sources of radiation are features of the environment. Radiation and radioactive substances have many beneficial applications, ranging from power generation to uses in medicine, industry and agriculture. The radiation risks to workers and the public and to the environment that may arise from these applications have to be assessed and, if necessary, controlled.

Activities such as the medical uses of radiation, the operation of nuclear installations, the production, transport and use of radioactive material, and the management of radioactive waste must therefore be subject to standards of safety.

Regulating safety is a national responsibility. However, radiation risks may transcend national borders, and international cooperation serves to promote and enhance safety globally by exchanging experience and by improving capabilities to control hazards, to prevent accidents, to respond to emergencies and to mitigate any harmful consequences.

States have an obligation of diligence and duty of care, and are expected to fulfil their national and international undertakings and obligations.

International safety standards provide support for States in meeting their obligations under general principles of international law, such as those relating to environmental protection. International safety standards also promote and assure confidence in safety and facilitate international commerce and trade.

A global nuclear safety regime is in place and is being continuously improved. IAEA safety standards, which support the implementation of binding international instruments and national safety infrastructures, are a cornerstone of this global regime. The IAEA safety standards constitute a useful tool for contracting parties to assess their performance under these international conventions.

THE IAEA SAFETY STANDARDS

The status of the IAEA safety standards derives from the IAEA’s Statute, which authorizes the IAEA to establish or adopt, in consultation and, where appropriate, in collaboration with the competent organs of the United Nations and with the specialized agencies concerned, standards of safety for protection of health and minimization of danger to life and property, and to provide for their application.
With a view to ensuring the protection of people and the environment from harmful effects of ionizing radiation, the IAEA safety standards establish fundamental safety principles, requirements and measures to control the radiation exposure of people and the release of radioactive material to the environment, to restrict the likelihood of events that might lead to a loss of control over a nuclear reactor core, nuclear chain reaction, radioactive source or any other source of radiation, and to mitigate the consequences of such events if they were to occur. The standards apply to facilities and activities that give rise to radiation risks, including nuclear installations, the use of radiation and radioactive sources, the transport of radioactive material and the management of radioactive waste.

Safety measures and security measures\(^1\) have in common the aim of protecting human life and health and the environment. Safety measures and security measures must be designed and implemented in an integrated manner so that security measures do not compromise safety and safety measures do not compromise security.

The IAEA safety standards reflect an international consensus on what constitutes a high level of safety for protecting people and the environment from harmful effects of ionizing radiation. They are issued in the IAEA Safety Standards Series, which has three categories (see Fig. 1).

**Safety Fundamentals**

Safety Fundamentals present the fundamental safety objective and principles of protection and safety, and provide the basis for the safety requirements.

**Safety Requirements**

An integrated and consistent set of Safety Requirements establishes the requirements that must be met to ensure the protection of people and the environment, both now and in the future. The requirements are governed by the objective and principles of the Safety Fundamentals. If the requirements are not met, measures must be taken to reach or restore the required level of safety. The format and style of the requirements facilitate their use for the establishment, in a harmonized manner, of a national regulatory framework. Requirements, including numbered ‘overarching’ requirements, are expressed as ‘shall’ statements. Many requirements are not addressed to a specific party, the implication being that the appropriate parties are responsible for fulfilling them.

---

\(^1\) See also publications issued in the IAEA Nuclear Security Series.
With a view to ensuring the protection of people and the environment from harmful effects of ionizing radiation, the IAEA safety standards establish fundamental safety principles, requirements and measures to control the radiation exposure of people and the release of radioactive material to the environment, to restrict the likelihood of events that might lead to a loss of control over a nuclear reactor core, nuclear chain reaction, radioactive source or any other source of radiation, and to mitigate the consequences of such events if they were to occur. Safety Fundamentals present the fundamental safety objective and principles of protection and safety, and provide the basis for the safety requirements.

**Safety Requirements**

An integrated and consistent set of Safety Requirements establishes the requirements that must be met to ensure the protection of people and the environment, both now and in the future. The requirements are governed by the objective and principles of the Safety Fundamentals. If the requirements are not met, measures must be taken to reach or restore the required level of safety. The format and style of the requirements facilitate their use for the establishment, in a harmonized manner, of a national regulatory framework. Requirements, including numbered ‘overarching’ requirements, are expressed as ‘shall’ statements. Many requirements are not addressed to a specific party, the implication being that the appropriate parties are responsible for fulfilling them.

**Safety Guides**

Safety Guides provide recommendations and guidance on how to comply with the safety requirements, indicating an international consensus that it is necessary to take the measures recommended (or equivalent alternative measures). The Safety Guides present international good practices, and increasingly they reflect best practices, to help users striving to achieve high levels of safety. The recommendations provided in Safety Guides are expressed as ‘should’ statements.

**APPLICATION OF THE IAEA SAFETY STANDARDS**

The principal users of safety standards in IAEA Member States are regulatory bodies and other relevant national authorities. The IAEA safety standards are also used by co-sponsoring organizations and by many organizations that design, construct and operate nuclear facilities, as well as organizations involved in the use of radiation and radioactive sources.
The IAEA safety standards are applicable, as relevant, throughout the entire lifetime of all facilities and activities — existing and new — utilized for peaceful purposes and to protective actions to reduce existing radiation risks. They can be used by States as a reference for their national regulations in respect of facilities and activities.

The IAEA’s Statute makes the safety standards binding on the IAEA in relation to its own operations and also on States in relation to IAEA assisted operations.

The IAEA safety standards also form the basis for the IAEA’s safety review services, and they are used by the IAEA in support of competence building, including the development of educational curricula and training courses.

International conventions contain requirements similar to those in the IAEA safety standards and make them binding on contracting parties. The IAEA safety standards, supplemented by international conventions, industry standards and detailed national requirements, establish a consistent basis for protecting people and the environment. There will also be some special aspects of safety that need to be assessed at the national level. For example, many of the IAEA safety standards, in particular those addressing aspects of safety in planning or design, are intended to apply primarily to new facilities and activities. The requirements established in the IAEA safety standards might not be fully met at some existing facilities that were built to earlier standards. The way in which IAEA safety standards are to be applied to such facilities is a decision for individual States.

The scientific considerations underlying the IAEA safety standards provide an objective basis for decisions concerning safety; however, decision makers must also make informed judgements and must determine how best to balance the benefits of an action or an activity against the associated radiation risks and any other detrimental impacts to which it gives rise.

DEVELOPMENT PROCESS FOR THE IAEA SAFETY STANDARDS

The preparation and review of the safety standards involves the IAEA Secretariat and four safety standards committees, for nuclear safety (NUSSC), radiation safety (RASSC), the safety of radioactive waste (WASSC) and the safe transport of radioactive material (TRANSSC), and a Commission on Safety Standards (CSS) which oversees the IAEA safety standards programme (see Fig. 2).

All IAEA Member States may nominate experts for the safety standards committees and may provide comments on draft standards. The membership of the Commission on Safety Standards is appointed by the Director General and

For example, many of the IAEA safety standards, in particular those addressing aspects of safety in planning or design, are intended to apply primarily to new facilities and activities. The requirements established in the IAEA safety standards might not be fully met at some existing facilities that were built to earlier standards. The way in which IAEA safety standards are to be applied to such facilities is a decision for individual States.

The scientific considerations underlying the IAEA safety standards provide an objective basis for decisions concerning safety; however, decision makers must also make informed judgements and must determine how best to balance the benefits of an action or an activity against the associated radiation risks and any other detrimental impacts to which it gives rise.

DEVELOPMENT PROCESS FOR THE IAEA SAFETY STANDARDS

The preparation and review of the safety standards involves the IAEA Secretariat and four safety standards committees, for nuclear safety (NUSSC), radiation safety (RASSC), the safety of radioactive waste (WASSC) and the safe transport of radioactive material (TRANSSC), and a Commission on Safety Standards (CSS) which oversees the IAEA safety standards programme (see Fig. 2).

All IAEA Member States may nominate experts for the safety standards committees and may provide comments on draft standards. The membership of the Commission on Safety Standards is appointed by the Director General and includes senior governmental officials having responsibility for establishing national standards.

A management system has been established for the processes of planning, developing, reviewing, revising and establishing the IAEA safety standards. It articulates the mandate of the IAEA, the vision for the future application of the safety standards, policies and strategies, and corresponding functions and responsibilities.

INTERACTION WITH OTHER INTERNATIONAL ORGANIZATIONS

The findings of the United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR) and the recommendations of international expert bodies, notably the International Commission on Radiological Protection (ICRP), are taken into account in developing the IAEA safety standards. Some

FIG. 2. The process for developing a new safety standard or revising an existing standard.
safety standards are developed in cooperation with other bodies in the United Nations system or other specialized agencies, including the Food and Agriculture Organization of the United Nations, the United Nations Environment Programme, the International Labour Organization, the OECD Nuclear Energy Agency, the Pan American Health Organization and the World Health Organization.

INTERPRETATION OF THE TEXT

Safety related terms are to be understood as defined in the IAEA Safety Glossary (see http://www-ns.iaea.org/standards/safety-glossary.htm). Otherwise, words are used with the spellings and meanings assigned to them in the latest edition of The Concise Oxford Dictionary. For Safety Guides, the English version of the text is the authoritative version.

The background and context of each standard in the IAEA Safety Standards Series and its objective, scope and structure are explained in Section 1, Introduction, of each publication.

Material for which there is no appropriate place in the body text (e.g. material that is subsidiary to or separate from the body text, is included in support of statements in the body text, or describes methods of calculation, procedures or limits and conditions) may be presented in appendices or annexes.

An appendix, if included, is considered to form an integral part of the safety standard. Material in an appendix has the same status as the body text, and the IAEA assumes authorship of it. Annexes and footnotes to the main text, if included, are used to provide practical examples or additional information or explanation. Annexes and footnotes are not integral parts of the main text. Annex material published by the IAEA is not necessarily issued under its authorship; material under other authorship may be presented in annexes to the safety standards. Extraneous material presented in annexes is excerpted and adapted as necessary to be generally useful.

1. INTRODUCTION

BACKGROUND

1.1. The Regulations for the Safe Transport of Radioactive Material (IAEA Safety Standards Series No. SSR-6, 2012 Edition) [1], henceforth called ‘the Regulations’, establish standards of safety that provide an acceptable level of control of the radiation, criticality and thermal hazards to persons, property and the environment that are associated with the transport of radioactive material. Protection from harmful effects of radiation during the transport of radioactive material is achieved by means of a combination of limitations on the contents of a package according to the quantity and type of radioactivity, the package design, and certain simple handling, storage and stowage precautions that are to be followed during transport.

1.2. While some provisions of the Regulations concern administrative controls (e.g. the requirement for the carrier to apply segregation to limit the radiation level in occupied areas), the main reliance is placed on provisions relating to the package, the responsibility for which rests primarily with the consignor of the package.

1.3. The Regulations are structured topically in terms of definitions, general provisions, activity limits and classification, requirements and controls for transport, requirements for radioactive materials and for packagings and packages, test procedures, and approval and administrative requirements.

1.4. The Regulations are supplemented by Safety Guides that provide recommendations on meeting the requirements of the Regulations.

1.5. This Safety Guide is prepared on the basis of the Regulations. It reproduces certain parts of the Regulations in a user friendly format for specified types of consignments, classified according to their associated UN numbers, but does not contain any additional requirements. Details, in particular of design, construction and testing of packagings, are omitted.

1.6. Although much of the information may not apply, a user desiring to transport a particular type of consignment of radioactive material would need to study and assimilate requirements from all sections of the Regulations. This Safety Guide aims to aid such users by providing a consolidation of certain requirements of the Regulations for each type of radioactive material, package or shipment. Once a consignor has properly classified the radioactive material
to be shipped (following the recommendations provided in Section 2 and Fig. 1, on pp. 10 and 11), the appropriate UN number can be assigned and the specific requirements for shipment can be found in the corresponding schedule. References are provided so that the Regulations can be readily consulted when necessary.

1.7. In order to reflect the mandatory status of the Regulations and to comply with the IAEA requirements on the preparation of Safety Guides, and without diluting their status, the word “shall” in the Regulations, where it needs to be reflected in this Safety Guide, has been replaced by the words “is required to” or “requirements apply”, while the phrase “shall not” in the Regulations has been replaced by the words “is not allowed”. In the event of a conflict or anomaly between the provisions of the Regulations and this Safety Guide, the requirements in the Regulations apply. For regulatory purposes, reference should be made to the detailed provisions of the Regulations.

OBJECTIVE

1.8. The objective of this Safety Guide is to provide information to aid users in determining the correct package type and the appropriate operational and administrative requirements to be applied.

SCOPE

1.9. This Safety Guide can be used for all transport of radioactive material. It contains 26 schedules corresponding to the UN numbers and associated proper shipping names for the radioactive material to be shipped.

1.10. The user’s attention is drawn to the fact that there may be deviations (i.e. exceptions and additions) from the Regulations necessitated by national and modal regulations and carrier restrictions, which are not reflected in this Safety Guide.

STRUCTURE

1.11. Section 2 describes how the material is to be classified and assigned to the appropriate UN number with the associated proper shipping name. The Safety Guide further contains 26 schedules corresponding to the number of UN numbers and associated proper shipping names for the radioactive material to be shipped.
1.12. The schedules are set out in numerical order according to the UN number. The information provided in each schedule follows the sequence of the work involved in transporting radioactive material.

1.13. Each schedule has the same eight subjects:

1. General provisions;
2. Contents limits for packages;
3. Contamination;
4. Maximum radiation levels;
5. Categories of packages and overpacks;
6. Marking and labelling;
7. Requirements before shipment;

2. DEFINITIONS AND CLASSIFICATION

2.1. This section defines terms that are necessary for the purposes of this Safety Guide and describes how radioactive material should be classified and assigned the appropriate UN number and associated proper shipping name.

DEFINITIONS

2.2. The following definitions are taken from the Regulations and reproduced here for the convenience of the user.

Contamination

*Contamination* shall mean the presence of a radioactive substance on a surface in quantities in excess of 0.4 Bq/cm² for beta and gamma emitters and *low toxicity alpha emitters*, or 0.04 Bq/cm² for all other alpha emitters.

Exclusive use

*Exclusive use* shall mean the sole use, by a single consignor, of a conveyance or of a large freight container, in respect of which all initial, intermediate and
final loading and unloading and shipment are carried out in accordance with the
directions of the consignor or consignee, where so required by the Regulations.

**Fissile nuclides and fissile material**

*Fissile nuclides* shall mean uranium-233, uranium-235, plutonium-239 and
plutonium-241. *Fissile material* shall mean a material containing any of these
*fissile nuclides*. Excluded from the definition of *fissile material* are the following:

(a) Natural uranium or depleted uranium that is unirradiated;
(b) Natural uranium or depleted uranium that has been irradiated in thermal
reactors only;
(c) Material with *fissile nuclides* less than a total of 0.25 g;
(d) Any combination of (a), (b) and (c).

These exclusions are only valid if there is no other material with *fissile nuclides*
in the package or in the consignment if shipped unpackaged.

**Low dispersible radioactive material**

*Low dispersible radioactive material* shall mean either a solid *radioactive
material* or a solid *radioactive material* in a sealed capsule that has limited
dispersibility and is not in powder form.

**Low specific activity material**

*Low specific activity (LSA) material* shall mean *radioactive material* that
by its nature has a limited specific activity, or *radioactive material* for which
limits of estimated average specific activity apply. External shielding materials
surrounding the *LSA material* shall not be considered in determining the
estimated average specific activity.

**Low toxicity alpha emitters**

*Low toxicity alpha emitters* are: natural uranium, depleted uranium, natural
thorium, uranium-235, uranium-238, thorium-232, thorium-228 and thorium-230
when contained in ores or physical and chemical concentrates; or alpha emitters
with a half-life of less than 10 days.
Package

Package shall mean the complete product of the packing operation, consisting of the packaging and its contents prepared for transport. The types of packages covered by the Regulations that are subject to the activity limits and material restrictions of Section IV of the Regulations and meet the corresponding requirements are:

(a) Excepted package;
(b) Industrial package Type 1 (Type IP-1);
(c) Industrial package Type 2 (Type IP-2);
(d) Industrial package Type 3 (Type IP-3);
(e) Type A package;
(f) Type B(U) package;
(g) Type B(M) package;
(h) Type C package.

Packages containing fissile material or uranium hexafluoride are subject to additional requirements.

Radioactive material

Radioactive material shall mean any material containing radionuclides where both the activity concentration and the total activity in the consignment exceed the values specified in paras 402–407 of the Regulations.

Special form radioactive material

Special form radioactive material shall mean either an indispersible solid radioactive material or a sealed capsule containing radioactive material.

Surface contaminated object

Surface contaminated object (SCO) shall mean a solid object that is not itself radioactive but which has radioactive material distributed on its surface.

Unilateral approval

Unilateral approval shall mean an approval of a design that is required to be given by the competent authority of the country of origin of the design only.
CLASSIFICATION

2.3. Radioactive material is required to be assigned one of the UN numbers specified in Table 1. The UN number assigned depends on the activity level of the radionuclides contained in the package, the fissile or non-fissile properties of these radionuclides, the type of package, and the nature or form of the radioactive contents of the package, or special arrangements governing the transport operation.

2.4. In all cases of international transport of packages requiring approval of design or shipment by the competent authority for which different approval types apply in the different countries concerned by the shipment, the UN number, proper shipping name, categorization, labelling and marking are required to be in accordance with the certificate of the country of origin of the design.
2.5. A flow diagram for classification of radioactive material to the appropriate UN number is provided in Fig. 1 to aid the assignment process. The objective of the flow diagram is not to indicate all possible options allowed by the regulations, nor to incorporate all of the detailed requirements and limits. Rather, it has to be seen as a tool to indicate the most suitable or optimized option for classification.

2.6. It is clear that it has to be verified that all of the requirements, limitations and prescriptions related to the UN number assigned can be complied with. If not, an alternative UN number will need to be assigned.

2.7. It is possible that for specific cases more than one UN number may be appropriate. In such cases, the choice of UN number would be left to the operator or consignor. Two examples of such situations are set out in the following:

(1) Some radioactive material may meet the criteria for both “limited quantity” and “LSA or SCO”. If the radioactive material is not fissile, following the route of the diagram — and assuming the material is not empty packaging, manufactured uranium or thorium, or enclosed in or included as a component part of an instrument or article — the first decision box encountered is “limited quantity”. If this option is selected, the material could be classified as UN 2910 RADIOACTIVE MATERIAL, EXCEPTED PACKAGE — LIMITED QUANTITY OF MATERIAL. This option has minimal administrative burden and requirements for the package but the activity of such an excepted package is required to be very low. However, this is not the only option for the package. Rather, the choice may be made to proceed to the decision box “LSA or SCO”. The material will now be classified as LSA or SCO (depending on the case) and can be shipped unpackaged in a larger amount as LSA-I or SCO-I without the restriction on the activity limit that is a requirement for excepted packages. However, the option “LSA or SCO” may incur a higher administrative burden that will need to be considered.

(2) If the amount of LSA material is such that the radiation level at 3 m from the unshielded material exceeds 10 mSv/h, then the consignor has the choice of limiting the amount of LSA material per package accordingly and classifying the package as an industrial package (IP), or using a Type B package, and assigning the appropriate UN number according to the choice made.
(Continued from previous page)

Special form
Activity ≤ 429, 430, Tables 2 and 3)

Activity ≤ 429, 430, Tables 2 and 3)

Special arrangement (310)
Radioactive material for which classification into one of the above UN numbers is impractical may be transported, subject to competent authority approval.

Activities ≤ to the following (433):
(a) For LDRM — as authorized for the package design as specified in the certificate of approval;
(b) For special form radioactive material — 3000A, or 100 000A, whichever is the lower;
(c) For all other radioactive material — 3000A.

a AL — activity limit for an exempt consignment; AC — activity concentration limit for exempt material; paragraph and table numbers refer to the Regulations [1].

b Fissile excepted by para. 417(a)–(f) should be treated as ‘No’.

c Articles manufactured from natural uranium, depleted uranium or natural thorium.

d Low dispersible radioactive material.

FIG. 1. Flow diagram for the classification of radioactive material with the appropriate UN number.

819  Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

Only contamination is allowed (see below).

417  If the package is contaminated by fissile material, one of the fissile exceptions provided by para. 417 is required to be applied.

422(a), 427  Classification as an excepted package.

3. CONTAMINATION

427(c)  Non-fixed contamination on the internal surfaces is not allowed to exceed 100 times the levels specified in para. 508.

427(d)  Any labels that may have been displayed in conformity with para. 538 are required to be removed or covered.

508  Non-fixed contamination on the external surfaces of any package is required to be kept as low as practicable and is not allowed to exceed the following limits, averaged over any area of 300 cm\(^2\) of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, \(4 \text{ Bq/cm}^2\);  
(b) All other alpha emitters, \(0.4 \text{ Bq/cm}^2\).

4. MAXIMUM RADIATION LEVELS

516  The radiation level at any point on the external surface of an excepted package is not allowed to exceed 5 \(\mu\text{Sv/h}\).

5. CATEGORIES OF PACKAGES AND OVERPACKS

Not applicable.
6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533 All package markings are required to be legible and durable, and are required to be on the outside of the packaging.

532 Packages are required to bear the mark “UN 2908”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

545 It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

581(c)–(e) A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

7. REQUIREMENTS BEFORE SHIPMENT

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.
The transport documents with each consignment (consignment notes) are required to include the identification of the consignor and the consignee, including their names and addresses, and the UN number UN 2908.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

A consignment may be accepted for domestic movement by national postal authorities, subject to such additional requirements as those established in para. 580 of the Regulations and as prescribed by the authorities.

A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

8.2. Placarding

Placards may be required for other dangerous properties of the contents, but not for the radioactive properties.

8.3. Stowage during transport, storage in transit and segregation

Not applicable.

8.4. Damaged or leaking packages

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.
8.5. Decontamination

Tanks and intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Transport of empty packaging is subject to additional requirements.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

2. CONTENTS LIMITS FOR PACKAGES

422(c), 426 Classification as an excepted package.

426 There is no limit on the quantity of material; the contents limits are on the type of material and on the outer surface of the material.

3. CONTAMINATION

508 Non-fixed contamination on the external surfaces of any package is required to be kept as low as practicable and is not allowed to exceed the following limits, averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

516 The radiation level at any point on the external surface of an excepted package is not allowed to exceed 5 µSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

Not applicable.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or consignee, or both.
All package markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 2909”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

7. REQUIREMENTS BEFORE SHIPMENT

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

The transport documents with each consignment (consignment notes) are required to include the identification of the consignor and consignee, including their names and addresses, and the UN number UN 2909.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

A consignment may be accepted for domestic movement by national postal authorities, subject to such additional requirements as those established in para. 580 of the Regulations and as prescribed by the authorities.

A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

8.2. Placarding

Placards may be required for other dangerous properties of the contents, but not for the radioactive properties.

Cconsignor’s responsibilities.

8.3. Stowage during transport, storage in transit and segregation

Not applicable.

8.4. Damaged or leaking packages

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Not applicable.
8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

</tbody>
</table>
Minimum dimensions of a package containing fissile excepted material.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

 Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The activity limits in Table 4 of the Regulations are required to be met.

The package is required to be marked “RADIOACTIVE” on an internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package; or on the outside of the package, when it is impractical to mark an internal surface.

For transport by post, the total activity in each package is not allowed to exceed one tenth of the relevant limit specified in Table 4 of the Regulations.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package is required to be kept as low as practicable and is not allowed to exceed the following limits, averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, $4 \text{ Bq/cm}^2$;
(b) All other alpha emitters, $0.4 \text{ Bq/cm}^2$.

4. MAXIMUM RADIATION LEVELS

The radiation level at any point on the external surface of an excepted package is not allowed to exceed 5 μSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

Not applicable.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All package markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 2910”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.
It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

7. REQUIREMENTS BEFORE SHIPMENT

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

The transport documents with each consignment (consignment notes) are required to include the identification of the consignor and consignee, including their names and addresses, and the UN number UN 2910.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

A consignment may be accepted for domestic movement by national postal authorities, subject to such additional requirements as those established in para. 580 of the Regulations and as prescribed by the authorities.
A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

8.2. Placarding

Placards may be required for other dangerous properties of the contents, but not for the radioactive properties.

8.3. Stowage during transport, storage in transit and segregation

Not applicable.

8.4. Damaged or leaking packages

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Not applicable.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

<tr>
<td>636</td>
<td>Minimum dimensions of a package containing fissile excepted material.</td>
</tr>
</tbody>
</table>
The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The activity limits in Table 4 of the Regulations are required to be met.

The active material is required to be completely enclosed by non-active components (a device performing the sole function of containing radioactive material is not allowed to be considered to be an instrument or manufactured article).

The radiation level at 10 cm from any point on the external surface of any unpackaged instrument or article is not allowed to exceed 0.1 mSv/h.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package is required to be kept as low as practicable and is not allowed to exceed the following limits, averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, $4 \text{ Bq/cm}^2$;
(b) All other alpha emitters, $0.4 \text{ Bq/cm}^2$. 
4. MAXIMUM RADIATION LEVELS

The radiation level at any point on the external surface of an excepted package is not allowed to exceed 5 μSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

Not applicable.

6. MARKING AND LABELLING

423(b) The instrument or article is required to be marked “RADIOACTIVE”, except for radioluminescent timepieces or devices or certain consumer products as specified in para. 423(b) of the Regulations.

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or consignee, or both.

531–533 All package markings are required to be legible and durable, and are required to be on the outside of the packaging.

532 Packages are required to bear the mark “UN 2911”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

545 It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

581(c)–(e) A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.
7. REQUIREMENTS BEFORE SHIPMENT

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

The transport documents with each consignment (consignment notes) are required to include the identification of the consignor and the consignee, including their names and addresses, and the UN number UN 2911.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

A consignment may be accepted for domestic movement by national postal authorities, subject to such additional requirements as those established in para. 580 of the Regulations and as prescribed by the authorities.

A consignment may be accepted for international movement by post, subject to such additional requirements as those established in para. 581 of the Regulations and as prescribed by the Acts of the Universal Postal Union.

8.2. Placarding

Placards may be required for other dangerous properties of the contents, but not for the radioactive properties.

Consignor’s responsibilities.
8.3. Stowage during transport, storage in transit and segregation

Not applicable.

8.4. Damaged or leaking packages

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Not applicable.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

LSA-I definition and criteria.

The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority of each State.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

LSA-I and SCO-I may be transported unpackaged under the conditions as stated in para. 520 of the Regulations.

No activity limits.
3. CONTAMINATION

508, 509 Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

514 The requirements of paras 508 and 509 of the Regulations on non-fixed contamination do not apply to the internal surfaces of a freight container, tank, intermediate bulk container or conveyance dedicated to the transport of unpackaged LSA-I material under exclusive use, for as long as it remains under exclusive use.

4. MAXIMUM RADIATION LEVELS

526–528, 575 (i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5 LSA material and SCO are required to be packaged in accordance with Table 5 of the Regulations.

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both. All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 2912” and the proper shipping name “RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-I)”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(a) Each package that conforms to an IP-1 or IP-2 design is required to be marked with “TYPE IP-1” or “TYPE IP-2” as appropriate.
Each package that conforms to an IP-2 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.

When the material is contained in receptacles or wrapping and is transported under exclusive use, it may be marked “RADIOACTIVE LSA-I”.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–537 of the Regulations.

The contents need to be marked on the label only as “LSA-I”.

The maximum activity of the contents is required to be marked on the label.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

For mixed loads, such entries may read “See Transport Documents”.
540(d) Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

545 It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

501(a) Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

**8.2. Placarding**

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where the consignment in a freight container or tank is unpackaged UN 2912 LSA-I only, or where an exclusive use consignment in a freight container is packaged UN 2912 LSA-I only, and no other UN number commodities are present in the freight container, the UN number “UN 2912” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

For carriage in or on a road or rail vehicle, where either the consignment is unpackaged UN 2912 LSA-I only, or where an exclusive use consignment is packaged UN 2912 LSA-I only, and no other UN number commodities are present, the UN number “UN 2912” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.
For consignments of LSA-I material there is no limit on the total sum of TIs for packages, overpacks and freight containers aboard a single conveyance.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

**8.4. Damaged or leaking packages**

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

**8.5. Decontamination**

Tanks and intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.
514 A freight container, intermediate bulk container or conveyance dedicated to the transport of unpackaged LSA-I or SCO-I material under exclusive use may be excepted from the requirements specified in paras 509 and 513 of the Regulations solely with regard to its internal surfaces and only for as long as it remains under that specific exclusive use.

8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Minimum dimensions of the package.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

SCO-I and II definition and criteria.

The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

LSA-I and SCO-I may be transported unpackaged under the conditions as stated in para. 520 of the Regulations.

Activity limits.
3. CONTAMINATION

508, 509 Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

514 The requirements of paras 508 and 509 of the Regulations on non-fixed contamination do not apply to the internal surfaces of a freight container, tank, intermediate bulk container or conveyance dedicated to the transport of unpackaged SCO-I material under exclusive use, for as long as it remains under exclusive use.

4. MAXIMUM RADIATION LEVELS

526–528, 575 (i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5  LSA material and SCO are required to be packaged in accordance with Table 5 of the Regulations.

523, 524  The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

529, Table 8  Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507  Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531  Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–534  All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9  Packages are required to bear the mark “UN 2913” and the proper shipping name, either “RADIOACTIVE MATERIAL, SURFACE CONTAMINATED OBJECTS (SCO-I)” or “RADIOACTIVE MATERIAL, SURFACE CONTAMINATED OBJECTS (SCO-II)”, depending on the contents.

533  Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(a)  Each package that conforms to an IP-1 or IP-2 design is required to be marked with “TYPE IP-1” or “TYPE IP-2” as appropriate.
Each package that conforms to an IP-2 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.

When the material is contained in receptacles or wrapping and is transported under exclusive use, it may be marked “RADIOACTIVE SCO-I”.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–537 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), followed by either “SCO-I” or “SCO-II”, as applicable. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

The maximum activity of the contents is required to be marked on the label.
540(c) Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

540(d) Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

545 It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

501(a) Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.
The consignor is required to provide a statement regarding actions to be taken by the carrier.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.
For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers, enlarged labels are permitted.
Where the consignment in the freight container is unpackaged SCO-I only, or where an exclusive use consignment in a freight container is packaged UN 2913 SCO-I or SCO-II, and no other UN number commodities are present, the UN number “UN 2913” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Cconsignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where the consignment in or on a road or rail vehicle is unpackaged UN 2913 SCO-I only, or where an exclusive use consignment is packaged UN 2913 SCO-I or SCO-II only, and no other UN number commodities are present, the UN number “UN 2913” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.
Criteria for segregation from members of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.
8.5. Decontamination

505 Intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

512 Periodic checking of conveyances and equipment is required to determine the level of contamination.

513 Decontamination of conveyances, equipment or parts thereof that have become contaminated.

514 A freight container, intermediate bulk container or conveyance dedicated to the transport of unpackaged LSA-I or SCO-I material under exclusive use may be excepted from the requirements specified in paras 509 and 513 of the Regulations solely with regard to its internal surfaces and only for as long as it remains under that specific exclusive use.

8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.
### SCHEDULE FOR UN 2915

**RADIOACTIVE MATERIAL, TYPE A PACKAGE, non-special form, non-fissile or fissile-excepted**

Additional design requirements for packages containing gases.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 429(b) and 430 of the Regulations.

When special form radioactive material and non-special form radioactive material are packed in the same Type A package, the quantity of radioactive material is not allowed to exceed the limits specified in para. 430 of the Regulations. In that case, the schedule for UN 3332 is also applicable.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.\(^1\)

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

---

\(^1\) Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
529, Table 8  Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–534 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 2915” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE A PACKAGE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(b) Each package is required to be marked with “TYPE A”.

534(c) Each package is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.

538 Any labels that do not relate to the contents are required to be removed or covered.

538, 543, Figs 2–4 Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.
The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI, except for category I-WHITE, for which the TI is not required. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.
Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.

The consignor is required to provide a statement regarding actions to be taken by the carrier.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.
(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

579 For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Placards may be required for other dangerous properties of the contents.

543, Fig. 6 Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

543 Any placards that do not relate to the contents are required to be removed.
As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 2915 Type A packages only, and no other UN number commodities are present, the UN number “UN 2915” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 2915 Type A packages only, and no other UN number commodities are present, the UN number “UN 2915” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.
562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

567 Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511 Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.
8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Additional design requirements for Type A packages.

Additional design requirements for packages containing liquids.

Additional design requirements for Type B packages.

Package design requirements — competent authority approval.

Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 432 and 433 of the Regulations.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having additional dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 2916” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE B(U) PACKAGE”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package is required to be marked with:
(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) “TYPE B(U)”.

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank, and are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics and confinement system conform to the approved design.
Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(v) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.

The consignor is required to provide a statement regarding actions to be taken by the carrier.
The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment containing radioactive material with an activity greater than $3000A_1$ or $3000A_2$, as appropriate, or $1000$ TBq, whichever is the lower, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations).
Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

Conditions for air transport.

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.
For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

**8.2. Placarding**

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.
Where an exclusive use consignment in a freight container is UN 2916 Type B(U) packages only, and no other UN number commodities are present, the UN number “UN 2916” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 2916 Type B(U) packages only, and no other UN number commodities are present, the UN number “UN 2916” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

### 8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

**Criteria for segregation from workers in regularly occupied working areas.**

**Criteria for segregation from members of the public.**
Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.
8.5. **Decontamination**

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. **Other provisions**

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Additional design requirements for packages containing liquids.

Additional design requirements for Type B packages.

Design requirements for Type B(M) packages, summary and exceptions.

Package design requirements — competent authority approval.

Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 432 and 433 of the Regulations.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.$^{1}$

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

---

$^{1}$ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533, 535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 2917” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE B(M) PACKAGE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

535 Each package is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;

(b) A serial number to uniquely identify each packaging that conforms to that design;

(c) “TYPE B(M)”. 

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

501(a), (b) Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics and confinement system conform to the approved design.

502, 503(a)–(c) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(v) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.
The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations).
825(a), (b) Shipments — competent authority approval.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.

827 Information to be included in an application for shipment approval.

828 When a shipment has been approved, the competent authority is required to issue an approval certificate.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

433 Conditions for air transport.

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

Restrictions on transport by air are set out in paras 577–579 of the Regulations.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.
Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 2917 Type B(M) packages only, and no other UN number commodities are present, the UN number “UN 2917” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 2917 Type B(M) packages only, and no other UN number commodities are present, the UN number “UN 2917” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Intermittent venting of Type B(M) packages may be permitted during transport under certain conditions.

636–647, 648(b) Additional design requirements for Type A packages.

649 Additional design requirements for packages containing liquids.

653–666 Additional design requirements for Type B(U) packages.

667 Design requirements for Type B(M) packages, summary and exceptions.

669 Design requirements for Type C packages.

802(b) Special arrangements — competent authority approval.

803–804 Design requirements for special form radioactive material and low dispersible radioactive material — competent authority approval.

807–813 Package design requirements — competent authority approval.

824 Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

417 If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

The quantity of radioactive material is not allowed to exceed the limits given in the competent authority approval certificate.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under special arrangement by air or by sea.¹

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

529, 530 A package, or an overpack containing packages, transported under special arrangement is required to be assigned to category III-YELLOW, except under certain provisions stated in para. 530 of the Regulations.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

530, 532, Table 9 Except under certain provisions stated in para. 530 of the Regulations, and except in case of uranium hexafluoride where provisions in para. 419 of the Regulations apply, packages are required to bear the mark “UN 2919” and the proper shipping name “RADIOACTIVE MATERIAL, TRANSPORTED UNDER SPECIAL ARRANGEMENT”.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533, 535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.
Each package is required to be marked, if appropriate, with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) In the case of a Type B(U) or Type B(M) package design, with “TYPE B(U)” or “TYPE B(M)”;
(d) In the case of a Type C package design, with “TYPE C”.

For Type B(U), Type B(M) or Type C packages, the outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.
Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment and heat transfer characteristics conform to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 607 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 608 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) Each Type B(U), Type B(M) and Type C package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.
For each Type B(U), Type B(M) and Type C package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 657 and 669 of the Regulations were made.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

558(d) For each shipment, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

559 The notification referred to in para. 559 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations).

Separate notification is not required if the information has been included in the application for shipment approval.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Approval of shipments under special arrangement.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.  

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

577–579 Restrictions on transport by air are set out in paras 577–579 of the Regulations.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Placards may be required for other dangerous properties of the contents.

543, Fig. 6 Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

543 Any placards that do not relate to the contents are required to be removed.
As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is a UN 2919 Special Arrangement only, and no other UN number commodities are present, the UN number “UN 2919” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is a UN 2919 Special Arrangement only, and no other UN number commodities are present, the UN number “UN 2919” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.
562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

567 Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. **Damaged or leaking packages**

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511 Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. **Decontamination**

512 Periodic checking of conveyances and equipment is required to determine the level of contamination.
Decontamination of conveyances, equipment or part thereof that have become contaminated.

8.6. **Other provisions**

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

</tbody>
</table>
Uranium hexafluoride, fissile, is required to be transported, as appropriate, in:
(a) Industrial packages of Type IP-2 or Type IP-3, as applicable (paras 624–626);
(b) Type A packages (para. 635);
(c) Type B(U) packages (para. 652);
(d) Type B(M) packages (para. 667);
(e) Type C packages (para. 669).

Additional requirements for packages designed to transport 0.1 kg or more of uranium hexafluoride.

Additional requirements for packages containing fissile material.

Package design requirements — competent authority approval, as appropriate.

Approval of package designs to contain fissile material.

Packaging serial numbers — informing the competent authority.

Approval of shipments under special arrangement.

2. CONTENTS LIMITS FOR PACKAGES

Fissile material and exceptions.

Fissile material.

Classification for uranium hexafluoride.

Contents of a package containing uranium hexafluoride.
The quantity of uranium hexafluoride is not allowed to exceed the relevant limits specified in the Regulations, as appropriate for each type of package.

A package is not allowed to contain any items other than those that are necessary for the use of the uranium hexafluoride. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm\(^2\) of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm\(^2\);
(b) All other alpha emitters, 0.4 Bq/cm\(^2\).

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) does not exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.\(^1\)

\(^1\) Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5  Type of package.

522, Table 6  Activity limits in case of LSA-II.

523, 524  The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686  CSI for packages containing fissile material, and for overpacks and freight containers.

529, Table 8  Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507  Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Class 8 labels are also required because of the corrosive properties of the contents.

531  Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–535  All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9  Packages are required to bear the mark “UN 2977” and the proper shipping name “RADIOACTIVE MATERIAL, URANIUM HEXAFLUORIDE, FISSILE”.
Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to:
(a) An IP-2 or an IP-3 design is required to be marked with “TYPE IP-2” or “TYPE IP-3” as appropriate;
(b) A Type A package design is required to be marked with “TYPE A”;
(c) A Type IP-2, Type IP-3 or Type A package design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.

Each package is required to be marked with:
(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) In the case of a Type B(U) or Type B(M) package design, with “TYPE B(U)” or “TYPE B(M)”;
(d) In the case of a Type C package design, with “TYPE C”.

For Type B(U), Type B(M) or Type C packages, the outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

For all packages, any labels that do not relate to the contents are required to be removed or covered.
Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

Before each shipment of any package, the following requirements apply:

(a) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(b) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(c) For each package, it is required to ensure that all the requirements specified in the approval certificates have been satisfied.

(d) Each Type B(U), Type B(M) and Type C package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(e) For each Type B(U), Type B(M) and Type C package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment listed below:

(a) Type C or Type B(U) packages containing radioactive material with an activity greater than $3000A_1$ or $3000A_2$, as appropriate, or $1000$ TBq, whichever is the lower;
(b) Type B(M) packages;
(c) Shipments under special arrangement;

the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). The mass of fissile material in grams (g) or multiples of grams, may be used in place of activity.
Separate notification is not required if the information has been included in the application for shipment approval (see para. 822 of the Regulations).

Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.

Approval of shipments under special arrangement.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal Requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

577–579 Restrictions on transport by air are set out in paras 577–579 of the Regulations.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Class 8 placards are also required because of the corrosive properties of the contents.
Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 2977 packaged fissile uranium hexafluoride only, and no other UN number commodities are present, the UN number “UN 2977” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placards shown in Fig. 6 of the Regulations against the white background, or on the placards shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consior’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 2977 packaged fissile uranium hexafluoride only, and no other UN number commodities are present, the UN number “UN 2977” is required to be displayed in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. Stowage during transport, storage in transit and segregation

562 Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or part thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Uranium hexafluoride is required to be transported, as appropriate, in:

(a) Industrial packages of Type IP-1, Type IP-2 or Type IP-3, as applicable (paras 623–626);
(b) Type A packages (para. 635);
(c) Type B(U) packages (para. 652);
(d) Type B(M) packages (para. 667);
(e) Type C packages (para. 669).

Additional requirements for packages designed to transport 0.1 kg or more of uranium hexafluoride.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Package design requirements — competent authority approval.

Packaging serial numbers — informing the competent authority.

Approval of shipments under special arrangement.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

Classification.

Contents of a package containing uranium hexafluoride.
The quantity of uranium hexafluoride is not allowed to exceed the relevant limits specified in the Regulations, as appropriate for each type of package.

A package is not allowed to contain any items other than those that are necessary for the use of the uranium hexafluoride. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5 Type of package.
522, Table 6 Activity limits in case of LSA-II.
523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.
529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations. Class 8 labels are also required because of the corrosive properties of the contents.
531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.
531–535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.
532, Table 9 Packages are required to bear the mark “UN 2978” and for packages, other than excepted packages, the proper shipping name “RADIOACTIVE MATERIAL, URANIUM HEXAFLUORIDE”.
Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to:

(a) An IP-1, IP-2 or an IP-3 design is required to be marked with “TYPE IP-1, TYPE IP-2” or “TYPE IP-3” as appropriate;
(b) A Type A package design is required to be marked with “TYPE A”;
(c) A Type IP-2, Type IP-3 or Type A package design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.

Each package is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) In the case of a Type B(U) or Type B(M) package design, with “TYPE B(U)” or “TYPE B(M)”;
(d) In the case of a Type C package design, with “TYPE C”.

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

Any labels that do not relate to the contents are required to be removed or covered.
Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, and heat transfer characteristics conform to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the approval certificates have been satisfied.

(iv) Each Type B(U), Type B(M) and Type C package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(v) For each Type B(U), Type B(M) and Type C package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

546 Transport documents with the consignment (consignment notes) are required to include all relevant particulars of the consignment. For excepted packages, only para. 546(c) of the Regulations is applicable.

547–553 The consignor is required to include a declaration in the transport documents.*

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.*

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.*

* Not applicable to excepted packages.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported.* The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment listed below:

(a) Type C or Type B(U) packages containing radioactive material with an activity greater than 3000A_1 or 3000A_2, as appropriate, or 1000 TBq, whichever is the lower;
(b) Type B(M) packages;
(c) Shipments under special arrangement;

the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material;

* Not applicable to excepted packages.
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). The mass of fissile material in grams (g), or multiples of grams, may be used in place of activity.

Separate notification is not required if the information has been included in the application for shipment approval (see para. 827 of the Regulations).

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.

Approval of shipments under special arrangement.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

577–579 Restrictions on transport by air are set out in paras 577–579 of the Regulations.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Class 8 placards are also required because of the corrosive properties of the contents.
Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 2978 packaged non-fissile or fissile-excepted uranium hexafluoride only, and no other UN number commodities are present, the UN number “UN 2978” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placards shown in Fig. 6 of the Regulations against the white background, or on the placards shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 2978 packaged non-fissile or fissile-excepted uranium hexafluoride only, and no other UN number commodities are present, the UN number “UN 2978” is required to be displayed in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. Stowage during transport, storage in transit and segregation

562 Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

567 Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.
8.4. Damaged or leaking packages

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511 Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

512 Periodic checking of conveyances and equipment is required to determine the level of contamination.

513 Decontamination of conveyances, equipment or part thereof that have become contaminated.

8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.
## SCHEDULE FOR UN 3321

**RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-II), non-fissile or fissile-excepted**

</table>
626–630 Alternative design requirements for Type IP-2 and Type IP-3 packages.

636 Minimum dimensions of the package.

801 The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

819 Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

409(b), 410 LSA-II definition and criteria.

A single package of non-combustible LSA-II material, if carried by air, is not allowed to contain an activity greater than 3000A₂.

411, 517 The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

417, 504 If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

504 A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

508, 509 Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm\(^2\) of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm\(^2\);
(b) All other alpha emitters, 0.4 Bq/cm\(^2\).

4. MAXIMUM RADIATION LEVELS

526–528, 575 (i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.\(^1\)

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5 LSA material and SCO are required to be packaged in accordance with Table 5 of the Regulations.

\(^1\) Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3321” and the proper shipping name “RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-II)”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with “TYPE IP-2” or “TYPE IP-3” as appropriate.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), followed by “LSA-II”. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

The maximum activity of the contents is required to be marked on the label.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

501(a) Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.
(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is packaged UN 3321 LSA-II only, and no other UN number commodities are present, the UN number “UN 3321” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

For carriage in or on a road or rail vehicle, where an exclusive use consignment is packaged UN 3321 LSA-II only, and no other UN number commodities are present, the UN number “UN 3321” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.
566(a), Table 10  
TI limits for freight containers and conveyances.

566(b)  
Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

567  
Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

576  
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. **Damaged or leaking packages**

510  
Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511  
Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. **Decontamination**

505  
Tanks and intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

512  
Periodic checking of conveyances and equipment is required to determine the level of contamination.

513  
Decontamination of conveyances, equipment or part thereof that have become contaminated.
8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

626, 627, 629, 630  Alternative design requirements for Type IP-2 and Type IP-3 packages.

636  Minimum dimensions of the package.

801  The consignor is required to demonstrate that the package design complies with all applicable competent authority requirements.

819  Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

409(c), 410  LSA-III definition and criteria.

A single package of non-combustible LSA-III material, if carried by air, is not allowed to contain an activity greater than 3000A₂.

411, 517  The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

417  If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

504  A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

508, 509  Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

526–528, 575  (i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5  LSA material and SCO are required to be packaged in accordance with Table 5 of the Regulations.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3322” and the proper shipping name “RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-III)”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with “TYPE IP-2” or “TYPE IP-3” as appropriate.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), followed by “LSA-III”. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

The maximum activity of the contents is required to be marked on the label.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

501(a) Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

### 8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is packaged UN 3322 LSA-III only, and no other UN number commodities are present, the UN number “UN 3322” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

For carriage in or on a road or rail vehicle, where an exclusive use consignment is packaged UN 3322 LSA-III only, and no other UN number commodities are present, the UN number “UN 3322” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.
566(a), Table 10  
TI limits for freight containers and conveyances.

566(b)  
Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

567  
Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

576  
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

510  
Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511  
Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

505  
Intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

512  
Periodic checking of conveyances and equipment is required to determine the level of contamination.

513  
Decontamination of conveyances, equipment or part thereof that have become contaminated.
8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

653–657, 661–666 Additional design requirements for Type B(U) packages.

669 Design requirements for Type C packages, summary.

670–672 Design requirements for Type C packages.

802(a), 808–810 Package design requirements — competent authority approval.

824 Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

417 If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

432 The quantity of radioactive material is not allowed to exceed the limits specified in para. 432 of the Regulations.

504 A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having additional dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533, 535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 3323” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE C PACKAGE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

535 Each package is required to be marked with:
   (a) The identification mark allocated to that design by the competent authority;
   (b) A serial number to uniquely identify each packaging that conforms to that design;
   (c) “TYPE C”.

536, Fig. 1 The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, and heat transfer characteristics conform to the approved design.
Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(v) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.

The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment containing radioactive material with an activity greater than $3000A_1$ or $3000A_2$, as appropriate, or 1000 TBq, whichever is the lower, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations).

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

### 8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 3323 Type C packages only, and no other UN number commodities are present, the UN number “UN 3323” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3323 Type C packages only, and no other UN number commodities are present, the UN number “UN 3323” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.
A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or part thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.
Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Alternative design requirements for Type IP-2 and Type IP-3 packages.

Minimum dimensions of the package.

Additional design requirements for packages containing fissile material.

Package design requirements — competent authority approval.

Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

LSA-II definition and criteria.

A single package of non-combustible LSA-II material, if carried by air, is not allowed to contain an activity greater than 3000A$_2$.

The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

Fissile material and exceptions.

Fissile material.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.\(^1\)

The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

LSA material and SCO is required to be packaged in accordance with Table 5 of the Regulations.

\(^1\) Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

CSI for packages containing fissile material, and overpacks and freight container.

Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3324” and the proper shipping name “RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-II), FISSILE”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with “TYPE IP-2” or “TYPE IP-3” as appropriate.

Each package that conforms to an IP-2 or IP-3 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.
Each package that conforms to a competent authority approved design is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), followed by “LSA-II”. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

The maximum activity of the contents is required to be marked on the label. The mass of fissile material, in units of grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

For large freight containers and tanks, alternative provisions are set out in Paragraph 543 of the Regulations.
Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.
The consignor is required to include a declaration in the transport documents.

The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

### 8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is packaged UN 3324 LSA-II only, and no other UN number commodities are present, the UN number “UN 3324” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Cconsignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

For carriage in or on a road or rail vehicle, where an exclusive use consignment is packaged UN 3324 LSA-II only, and no other UN number commodities are present, the UN number “UN 3324” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.
TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

CSI limits for freight containers and conveyances.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

Segregation of packages during transport and storage in transit.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Tanks and intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

Periodic checking of conveyances and equipment is required to determine the level of contamination.
Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

2. CONTENTS LIMITS FOR PACKAGES

409(c), 410 LSA-III definition and criteria.
A single package of non-combustible LSA-III material, if carried by air, is not allowed to contain an activity greater than 3000A2.

411, 517 The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

417 Fissile material and exceptions.

418 Fissile material.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5  LSA material and SCO is required to be packaged in accordance with Table 5 of the Regulations.

523, 524  The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686  CSI for packages containing fissile material, and overpacks and freight containers.

529, Table 8  Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507  Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531  Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531 – 535  All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9  Packages are required to bear the mark “UN 3325” and the proper shipping name “RADIOACTIVE MATERIAL, LOW SPECIFIC ACTIVITY (LSA-III), FISSIONABLE”

533  Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(a)  Each package that conforms to an IP-2 or IP-3 design is required to be marked with “TYPE IP-2” or “TYPE IP-3” as appropriate.
534(c) Each package that conforms to an IP-2 or IP-3 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.

535 Each package that conforms to a competent authority approved design is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design.

538 Any labels that do not relate to the contents are required to be removed or covered.

538, 541–543, Figs 2–5 Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

539 The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

540(a) Each label is required to be marked with the name(s) of the radionuclide(s), followed by “LSA-III”. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

540(b) The maximum activity of the contents is required to be marked on the label. The mass of fissile material, in units of grams (g), or multiples of grams, may be used instead of the activity.
Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.
(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.
(iv) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

557 Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

825(c) Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.

827 Information to be included in an application for shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:

(i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;

(ii) The package or overpack is secured to retain its position within the enclosure during routine transport;

(iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

**8.2. Placarding**

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is packaged UN 3325 LSA-III only, and no other UN number commodities are present, the UN number “UN 3325” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Cconsignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

For carriage in or on a road or rail vehicle, where an exclusive use consignment is packaged UN 3325 LSA-III only, and no other UN number commodities are present, the UN number “UN 3325” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the critical group of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.
566(a), Table 10  TI limits for freight containers and conveyances.

566(b)  Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c)  CSI limits for freight containers and conveyances.

567  Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

568, 569, Table 11  Segregation of packages during transport and storage in transit.

576  For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

510  Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511  Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

505  Intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

512  Periodic checking of conveyances and equipment is required to determine the level of contamination.
Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

624 Design requirements for the packaging and the package, Type IP-2.

626–630 Alternative design requirements for Type IP-2 packages.

636 Minimum dimensions of the package.

673–685 Additional design requirements for packages containing fissile material.

802(a), 814–816 Package design requirements — competent authority approval.

824 Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

413 SCO-I and SCO-II definition and criteria.

414, 517 The contents are required to be restricted in accordance with the radiation levels specified in para. 517 of the Regulations.

417 Fissile material and exceptions.

418 Fissile material.

504 A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

The requirements of paras 508 and 509 of the Regulations concerning non-fixed contamination do not apply to the internal surfaces of a freight container, tank, intermediate bulk container or conveyance dedicated to the transport of unpackaged SCO-I material under exclusive use, for as long as it remains under exclusive use.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

521, Table 5  LSA material and SCO are required to be packaged in accordance with Table 5 of the Regulations.

523, 524  The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686  CSI for packages containing fissile material, and for overpacks and freight containers.

529, Table 8  Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507  Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531  Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–535  All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9  Packages are required to bear the mark “UN 3326” and the proper shipping name, either “RADIOACTIVE MATERIAL, SURFACE CONTAMINATED OBJECTS (SCO-I) FISSION” or “RADIOACTIVE MATERIAL, SURFACE CONTAMINATED OBJECTS (SCO-II) FISSION”, depending on the contents.
Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package that conforms to an IP-1 or IP-2 design is required to be marked with “TYPE IP-1” or “TYPE IP-2” as appropriate.

Each package that conforms to an IP-2 design is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of design.

Each package that conforms to a competent authority approved design is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.
540(a) Each label is required to be marked with the name(s) of the radionuclide(s), followed by either “SCO-I” or “SCO-II”, as applicable. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

540(b) The maximum activity of the contents is required to be marked on the label. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

540(c) Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

540(d) Each label is required to show the TI, except for category I-WHITE, for which the TI is not required.

545 It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

501 Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.
Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

825(c) Shipment — competent authority multilateral approval is required where the CSI is greater than 50.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.

827 Information to be included in an application for shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.
Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers, enlarged labels are permitted.

Where the consignment in the freight container is unpackaged SCO-I only, or where an exclusive use consignment in a freight container is packaged UN 3326 SCO-I or SCO-II only, and no other UN number commodities are present, the UN number “UN 3326” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where the consignment in or on a road or rail vehicle is unpackaged UN 3326 SCO-I only, or where an exclusive use consignment is packaged UN 3326 SCO-I or SCO-II only, and no other UN number commodities are present, the UN number “UN 3326” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.

A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

CSI limits for freight containers and conveyances.

Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.
Segregation of packages during transport and storage in transit.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

**8.4. Damaged or leaking packages**

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

**8.5. Decontamination**

Intermediate bulk containers used for the transport of radioactive material are not allowed to be used for storage or transport of other goods, unless decontaminated below one tenth of the levels specified in paras 508 and 509 of the Regulations.

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

A freight container, intermediate bulk container or conveyance dedicated to the transport of unpackaged LSA-I or SCO-I material under exclusive use may be excepted from the requirements specified in paras 508, 509 and 513 of the Regulations solely with regard to its internal surfaces and only for as long as it remains under that specific exclusive use.
8.6. Other provisions

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

582 Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

583 Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

2. CONTENTS LIMITS FOR PACKAGES

Fissile material and exceptions.

Fissile material.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 429(b) and 430 of the Regulations.

When special form radioactive material and non-special form radioactive material are packed in the same Type A package, the quantity of radioactive material is not allowed to exceed the limits specified in para. 430 of the Regulations. In that case, the schedule for UN 3333 is also applicable.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.  

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

---

Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
CSI for packages containing fissile material, and for overpacks and freight containers.

Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3327” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE A PACKAGE, FISSILE”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package is required to be marked with “TYPE A”.

Each package is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.
Each package that conforms to a competent authority approved design is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI, except for category I-WHITE, for which the TI is not required. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

501 Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

502, 503(a), (d) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

825(c) Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

825(d) Radiation protection programmes for shipments by special use vessels.

826 Competent authority authorization of transport without shipment approval.

827 Information to be included in an application for shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:

(i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;

(ii) The package or overpack is secured to retain its position within the enclosure during routine transport;

(iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

579 For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Placards may be required for other dangerous properties of the contents.
Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 3327 Type A packages only, and no other UN number commodities are present, the UN number “UN 3327” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3327 Type A packages only, and no other UN number commodities are present, the UN number “UN 3327” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. Stowage during transport, storage in transit and segregation

562 Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

619–621 Additional design requirements — air transport.

636–647, 648(b) Additional design requirements for Type A packages.

649 Additional design requirements for packages containing liquids.

652 Design requirements for Type B(U) packages, summary.

653–666 Additional design requirements for Type B packages.

673–685 Additional design requirements for packages containing fissile material.

802(a), 808–810, 814–816 Package design requirements — competent authority approval.

824 Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

417 Fissile material and exceptions.

418 Fissile material.

432, 433 The quantity of radioactive material is not allowed to exceed the limits specified in paras 432 and 433 of the Regulations.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686 CSI for packages containing fissile material, and for overpacks and freight containers.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533, 535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 3328” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE B(U) PACKAGE, FISSILE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.
Each package is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) “TYPE B(U)”.

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.
Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.
(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.
(iv) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.
(v) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

(vi) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

557 Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.
For each shipment containing radioactive material with an activity greater than 3000A₁ or 3000A₂, as appropriate, or 1000 TBq, whichever is the lower, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). The mass of fissile material in grams (g), or multiples of grams, may be used in place of activity.

Separate notification is not required if the information has been included in the application for shipment approval (see para. 827 of the Regulations).

Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.
Information to be included in an application for shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

Conditions for air transport.

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.
For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

**8.2. Placarding**

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.
Where an exclusive use consignment in a freight container is UN 3328 Type B(U) packages only, and no other UN number commodities are present, the UN number “UN 3328” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3328 Type B(U) packages only, and no other UN number commodities are present, the UN number “UN 3328” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. **Stowage during transport, storage in transit and segregation**

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the public.
562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. **Damaged or leaking packages**

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.
Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.
SCHEDULE FOR UN 3329

RADIOACTIVE MATERIAL, TYPE B(M) PACKAGE, FISSILE

Paragraph(s) of the Regulations [1]  

1. GENERAL PROVISIONS

110, 507 Other dangerous properties of contents and transport with other dangerous goods.

301–303 General provisions for radiation protection.

304, 305, 554(c) Emergency response.

306 Management system.

311–315 Training.

431 Classification in case of international shipment when different approval types apply.

501(a)–(c) Requirements before the first shipment.

502, 503 Requirements before each shipment.

561 Possession of package design approval certificates, and possession of instructions for (a) the proper closing of the package and (b) other preparations for shipment.

602–604 Design requirements for special form radioactive material.

605 Design requirements for low dispersible radioactive material.

607–618 Design requirements for all packagings and packages.

619–621 Additional design requirements — air transport.

222
636–647, 648(b) Additional design requirements for Type A packages.
649 Additional design requirements for packages containing liquids.
653–666 Additional design requirements for Type B packages.
667 Design requirements for Type B(M) packages, summary and exceptions.
673–685 Additional design requirements for packages containing fissile material.
802(a), 811–816 Package design requirements — competent authority approval.
824 Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES
417 Fissile material and exceptions.
418 Fissile material.
432, 433 The quantity of radioactive material is not allowed to exceed the limits specified in paras 432 and 433 of the Regulations.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.\(^1\)

---

\(^1\) Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686 CSI for packages containing fissile material, and for overpacks and freight containers.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–533, 535 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 3329” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE B(M) PACKAGE, FISSILE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.
Each package is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) “TYPE B(M)”.

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.
Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

Before each shipment of any package, the following requirements apply:

(a) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(b) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(c) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(d) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.
(e) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

(f) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

557 Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.
For each shipment, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). The mass of fissile material in grams (g), or multiples of grams, may be used in place of activity.

Separate notification is not required if the information has been included in the application for shipment approval (see para. 827 of the Regulations).

Shipments — competent authority approval.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

Conditions for air transport.

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.
For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

Restrictions on transport by air are set out in paras 577–579 of the Regulations.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.
Where an exclusive use consignment in a freight container is UN 3329 Type B(M) packages only, and no other UN number commodities are present, the UN number “UN 3329” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

C ons ignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3329 Type B(M) packages only, and no other UN number commodities are present, the UN number “UN 3329” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.
562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.
Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Intermittent venting of Type B(M) packages may be permitted during transport under certain conditions.

Additional design requirements for Type A packages.

Additional design requirements for packages containing liquids.

Additional design requirements for B(U) packages.

Design requirements for Type C packages, summary.

Additional design requirements for Type C packages.

Additional design requirements for packages containing fissile material.

Package design requirements — competent authority approval.

Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

The quantity of radioactive material is not allowed to exceed the limits specified in para. 432 of the Regulations.

Fissile material and exceptions.

Fissile material.

A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.
3. CONTAMINATION

508, 509 Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

526–528, 575 (i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
CSI for packages containing fissile material, and for overpacks and freight containers.

Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3330” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE C PACKAGE, FISSILE”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

Each package is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design;
(c) “TYPE C”.

The outside of the outermost receptacle that is resistant to the effects of fire and water is required to be plainly marked by embossing, stamping, or other means resistant to the effects of fire and water, with the trefoil symbol shown in Fig. 1 of the Regulations.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.
Before each shipment of any package, the following requirements apply:

(a) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.
(b) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.
(c) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.
(d) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.
(e) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.
(f) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.
The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

For each shipment containing radioactive material with an activity greater than 3000A₁ or 3000A₂, as appropriate, or 1000 TBq, whichever is the lower, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). The mass of fissile material in grams (g), or multiples of grams, may be used in place of activity.

Separate notification is not required if the information has been included in the application for shipment approval (see para. 827 of the Regulations).

Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.
Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 3330 Type C packages only, and no other UN number commodities are present, the UN number “UN 3330” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Cconsignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3330 Type C packages only, and no other UN number commodities are present, the UN number “UN 3330” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. **Stowage during transport, storage in transit and segregation**

562 Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

### 8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

### 8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

### 8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

2. CONTENTS LIMITS FOR PACKAGES

417 Fissile material and exceptions.
The quantity of radioactive material is not allowed to exceed the limit given in the competent authority approval certificate.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack, except when transported under exclusive use by rail or by road is not allowed to exceed 2 mSv/h, or under special arrangement by air or by sea.$^1$

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

---

$^1$ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686 The CSI for packages containing fissile material is required to be obtained in accordance with paras 528 and 529 of the Regulations.

529, 530 A package or an overpack containing packages, transported under special arrangement is required to be assigned to category III-YELLOW, except under certain provisions stated in para. 530 of the Regulations.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

530, 532, Table 9 Except under certain provisions stated in para. 530 of the Regulations, and except in case of uranium hexafluoride where provisions in para. 419 of the Regulations apply, packages are required to bear the mark “UN 3331” and the proper shipping name “RADIOACTIVE MATERIAL, TRANSPORTED UNDER SPECIAL ARRANGEMENT, FISSION”.

531 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

535 Each package is required to be marked with an identification of either the consignor or the consignee, or both.
Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container or tank. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. For fissile materials, the mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

7. REQUIREMENTS BEFORE SHIPMENT

Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.
Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) Each package is required to be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval.

(v) For each package, it is required to ensure by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of paras 659 and 671 of the Regulations were made.

(vi) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.
The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

For each shipment, the consignor is required to notify the competent authority of each State through or into which the consignment is to be transported. This notification is required to have been received by each competent authority prior to the commencement of the shipment, and preferably at least seven days in advance. See also para. 559 of the Regulations.

The notification referred to in para. 558 of the Regulations is required to include:

(a) Clear identification of the package, including all applicable certificate numbers and identification marks;
(b) The date of shipment, the expected date of arrival and the proposed routeing;
(c) The names of the radioactive materials or nuclides;
(d) Descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material;
(e) The maximum activity of the radioactive contents during transport, expressed in becquerels (Bq) with the appropriate SI prefix symbol (see Annex II of the Regulations). For fissile material, the mass of fissile material in grams (g), or multiples of grams, may be used in place of activity.

Separate notification is not required if the information has been included in the application for shipment approval.

Radiation protection programmes for shipments by special use vessels.
Competent authority authorization of transport without shipment approval.

Approval of shipments under special arrangement.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

Restrictions on transport by air are set out in paras 577–579 of the Regulations.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers and tanks are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers and tanks, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is a UN 3331 Special Arrangement only, and no other UN number commodities are present, the UN number “UN 3331” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

C consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.
Where an exclusive use consignment in or on a road or rail vehicle is a UN 3331 Special Arrangement only, and no other UN number commodities are present, the UN number “UN 3331” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.
566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.

576 For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. **Damaged or leaking packages**

510 Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

511 Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. **Decontamination**

512 Periodic checking of conveyances and equipment is required to determine the level of contamination.

513 Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. **Other provisions**

309 In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.
Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Additional design requirements for packages containing gases.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Design requirements for special form radioactive material — competent authority approval.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 429(a) and 430 of the Regulations.

When special form radioactive material and non-special form radioactive material are packed in the same Type A package, the quantity of radioactive material is not allowed to exceed the limits specified in para. 430 of the Regulations. In that case, the schedule for UN 2915 is also applicable.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm$^2$ of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm$^2$;
(b) All other alpha emitters, 0.4 Bq/cm$^2$.

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.$^1$

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

---

$^1$ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–534 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 3332” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE A PACKAGE, SPECIAL FORM”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(b) Each package is required to be marked with “TYPE A”.

534(c) Each package is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.

538 Any labels that do not relate to the contents are required to be removed or covered.
Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI, except for category I-WHITE, for which the TI is not required. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.

Before the first shipment of any package for which the design pressure exceeds 35 kPa, confirmation is required that the containment system conforms to the approved design.
Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

The consignor is required to include a declaration in the transport documents.

The consignor is required to provide a statement regarding actions to be taken by the carrier.

The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.
8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

573(a)–(c) For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:
   (i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;
   (ii) The package or overpack is secured to retain its position within the enclosure during routine transport;
   (iii) There are no loading or unloading operations between the beginning and the end of the shipment.

(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.
For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

Transport by post is not permitted.

8.2. Placarding

Placards may be required for other dangerous properties of the contents.

Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 3332 Type A packages only, and no other UN number commodities are present, the UN number “UN 3332” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Cconsignor’s responsibilities.
The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3332 Type A packages only, and no other UN number commodities are present, the UN number “UN 3332” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

8.3. Stowage during transport, storage in transit and segregation

Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

Criteria for segregation from workers in regularly occupied working areas.

Criteria for segregation from members of the public.

Criteria for segregation from undeveloped photographic film.

Criteria for segregation from other dangerous goods.

Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

Consignments are required to be securely stowed.
A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

TI limits for freight containers and conveyances.

Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

Any package or overpack having a TI greater than 10 is required to be transported only under exclusive use.

For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.
Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

Additional design requirements for packages containing gases.

Additional design requirements for packages containing fissile material.

Package design requirements — competent authority approval.

Design requirements for special form radioactive material — competent authority approval.

Packaging serial numbers — informing the competent authority.

2. CONTENTS LIMITS FOR PACKAGES

Fissile material and exceptions.

Fissile material.

The quantity of radioactive material is not allowed to exceed the limits specified in paras 429(a) and 430 of the Regulations.

When special form radioactive material and non-special form radioactive material are packed in the same Type A package, the quantity of radioactive material is not allowed to exceed the limits specified in para. 430 of the Regulations. In that case, the schedule for UN 3327 is also applicable.
A package is not allowed to contain any items other than those that are necessary for the use of the radioactive material. The interaction between these items and the package, under the conditions of transport applicable to the design, is not allowed to reduce the safety of the package.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package and on the external and internal surfaces of overpacks, freight containers, tanks, intermediate bulk containers and conveyances is required to be kept as low as practicable and is not allowed to exceed the following limits, when averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².

4. MAXIMUM RADIATION LEVELS

(i) The radiation level for a package or overpack is required to be such that the transport index (TI) of the package or overpack does not exceed 10, and the criticality safety index (CSI) is not allowed to exceed 50, except when transported under exclusive use.

(ii) The maximum radiation level at any point on any external surface of the package or overpack is not allowed to exceed 2 mSv/h, except when transported under exclusive use by rail or by road, or under exclusive use by sea.¹

(iii) The maximum radiation level at any point on any external surface of a package or overpack transported under exclusive use is not allowed to exceed 10 mSv/h.

¹ Packages or overpacks having a surface radiation level greater than 2 mSv/h carried in or on a vehicle under exclusive use may be transported by vessels in accordance with Table 10 of the Regulations, footnote (a), provided that such packages or overpacks are not removed from the vehicle at any time while on board the vessel.
5. CATEGORIES OF PACKAGES AND OVERPACKS

523, 524 The TI is required to be derived in accordance with the procedure as stated in paras 523 and 524 of the Regulations.

525, 686 CSI for packages containing fissile material, and for overpacks and freight containers.

529, Table 8 Packages and overpacks are required to be assigned to category I-WHITE, category II-YELLOW or category III-YELLOW.

6. MARKING AND LABELLING

507 Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

531 Each package is required to be marked with an identification of either the consignor or the consignee, or both.

531–534 All markings are required to be legible and durable, and are required to be on the outside of the packaging.

532, Table 9 Packages are required to bear the mark “UN 3333” and the proper shipping name “RADIOACTIVE MATERIAL, TYPE A PACKAGE, SPECIAL FORM, FISSILE”.

533 Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

534(b) Each package is required to be marked with “TYPE A”.

534(c) Each package is required to be marked with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer or other identification of the packaging specified by the competent authority of the country of origin of the design.
Each package that conforms to a competent authority approved design is required to be marked with:

(a) The identification mark allocated to that design by the competent authority;
(b) A serial number to uniquely identify each packaging that conforms to that design.

Any labels that do not relate to the contents are required to be removed or covered.

Each package, overpack and freight container is required to bear the appropriate labels. Paragraph 543 of the Regulations sets out alternative provisions for large freight containers and tanks.

The labels are required to be fixed to two opposite sides of the outside of the package or overpack, or on all four sides of a freight container. The labels are not allowed to cover the markings specified in paras 531–536 of the Regulations.

Each label is required to be marked with the name(s) of the radionuclide(s), the maximum activity of the contents and the TI, except for category I-WHITE, for which the TI is not required. Paragraph 540(a) of the Regulations also establishes requirements for labelling mixtures of radionuclides. The mass of fissile material, in grams (g), or multiples of grams, may be used instead of the activity.

Except for mixed loads, each label on a freight container or overpack is required to be marked with:

(i) The radioactive contents;
(ii) The maximum activity of the total radioactive contents during transport.

For mixed loads, such entries may read “See Transport Documents”.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

501 Before the first shipment, confirmation is required that the shielding, containment, heat transfer characteristics, confinement system and neutron poisons conform to the approved design.

502, 503(a), (d) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

(iii) For each package, it is required to ensure that all the requirements specified in the competent authority approval certificates have been satisfied.

(iv) For packages containing fissile material, the measurement specified in para. 677(b) of the Regulations and the tests to demonstrate closure of each package as specified in para. 680 of the Regulations are required to be performed where applicable.

546 Transport documents with each consignment (consignment notes) are required to include all relevant particulars of the consignment.

547–553 The consignor is required to include a declaration in the transport documents.

554, 555 The consignor is required to provide a statement regarding actions to be taken by the carrier.

556 The consignor is required to make competent authority certificates available to the carrier(s) before loading and unloading.
Before the first shipment, the consignor is required to ensure that copies of each competent authority certificate applying to that package design have been submitted to the competent authority of each State through or into which the consignment is to be transported. The consignor is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make an acknowledgement of receiving the certificate.

Shipments — competent authority multilateral approval is required where the CSI is greater than 50.

Radiation protection programmes for shipments by special use vessels.

Competent authority authorization of transport without shipment approval.

Information to be included in an application for shipment approval.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

For transport by rail and by road: for consignments under exclusive use, the radiation level is not allowed to exceed:

(a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:

(i) The vehicle is equipped with an enclosure that prevents unauthorized access during transport;

(ii) The package or overpack is secured to retain its position within the enclosure during routine transport;

(iii) There are no loading or unloading operations between the beginning and the end of the shipment.
(b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle.

(c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is transported in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.

574 For transport by road: no persons other than the driver and assistants are permitted in vehicles carrying packages, overpacks or freight containers bearing category II-YELLOW or category III-YELLOW labels.

575 For transport by vessels: packages or overpacks having a surface radiation level greater than 2 mSv/h, unless being carried in or on a vehicle under exclusive use in accordance with Table 10 of the Regulations, footnote (a), are not allowed to be transported.

576 For transport by vessels: the transport of consignments by means of a special use vessel is excepted from the requirements of para. 566 of the Regulations relating to TI, CSI and radiation level provided that the conditions stated in para. 576 of the Regulations are met.

579 For transport by air: packages or overpacks having a surface radiation level greater than 2 mSv/h are not allowed to be transported, except under special arrangement.

580, 581 Transport by post is not permitted.

8.2. Placarding

507 Placards may be required for other dangerous properties of the contents.
Large freight containers are required to bear four placards in a vertical orientation on the two external side walls and the two external end walls.

Any placards that do not relate to the contents are required to be removed.

As an alternative to the use of placards on large freight containers, enlarged labels are permitted.

Where an exclusive use consignment in a freight container is UN 3333 Type A packages only, and no other UN number commodities are present, the UN number “UN 3333” is required to be displayed on all four sides of the freight container, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background, or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.

Consignor’s responsibilities.

The location of placards and the use of placards with reduced dimensions on a road or rail vehicle are stipulated.

Where an exclusive use consignment in or on a road or rail vehicle is UN 3333 Type A packages only, and no other UN number commodities are present, the UN number “UN 3333” is required to be displayed, in black digits not less than 65 mm high, either in the lower half of the placard shown in Fig. 6 of the Regulations against the white background or on the placard shown in Fig. 7 of the Regulations. If the placard shown in Fig. 7 of the Regulations is used, it is required to be fixed close to each main placard.
8.3. Stowage during transport, storage in transit and segregation

562 Packages, overpacks and freight containers are required to be segregated during transport and during storage in transit. The criteria for segregation are set out in paras 562(a)–(d) and 506 of the Regulations.

562(a) Criteria for segregation from workers in regularly occupied working areas.

562(b) Criteria for segregation from members of the public.

562(c) Criteria for segregation from undeveloped photographic film.

562(d), 506 Criteria for segregation from other dangerous goods.

563 Category II-YELLOW or category III-YELLOW packages or overpacks may be carried in compartments occupied by passengers under specific conditions.

564 Consignments are required to be securely stowed.

565 A package or overpack may be carried or stored among packaged general cargo, under certain conditions.

566(a), Table 10 TI limits for freight containers and conveyances.

566(b) Limits on the radiation levels from freight containers and conveyances. See para. 573(b) and (c) of the Regulations for exceptions.

566(c), Table 11 CSI limits for freight containers and conveyances.

567 Any package or overpack having a TI greater than 10, or any consignment having a CSI greater than 50, is required to be transported only under exclusive use.

568, 569, Table 11 Segregation of packages during transport and storage in transit.
For a special use vessel, the storage arrangements are excepted from the requirements of para. 566 of the Regulations provided that the conditions stated in para. 576 of the Regulations are met.

8.4. Damaged or leaking packages

Actions to be taken when a package has been damaged or is leaking, or where it is suspected that the package may have leaked or been damaged.

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Periodic checking of conveyances and equipment is required to determine the level of contamination.

Decontamination of conveyances, equipment or parts thereof that have become contaminated.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.

## SCHEDULE FOR UN 3507

**URANIUM HEXAFLUORIDE, RADIOACTIVE MATERIAL, EXCEPTED PACKAGE, less than 0.1 kg per package, non-fissile or fissile-excepted**

<td>Requirements — general. If the excepted package contains fissile material, one of the fissile exceptions provided by para. 417 is required to be applied. Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.</td>
</tr>
<tr>
<td>607–618</td>
<td>Design requirements for the packaging and the package.</td>
</tr>
<tr>
<td>619–621</td>
<td>Additional design requirements — air transport.</td>
</tr>
</tbody>
</table>
Minimum dimensions of a package containing fissile excepted material.

The consignor is required to demonstrate on request that the package design complies with all applicable competent authority requirements.

Transitional arrangements for packages designed under the provisions of the 1985 or 1985 (As Amended 1990) Editions of the Regulations.

2. CONTENTS LIMITS FOR PACKAGES

If the package contains fissile material, one of the fissile exceptions provided by para. 417 of the Regulations is required to be applied.

Fissile material excepted under para. 417(f) is required to comply with para. 606 and requires multilateral approval by the competent authority in each State.

Contents of a package containing uranium hexafluoride.

The activity limits in Table 4 of the Regulations are required to be met.

Additional requirements for classification under UN 3507.

3. CONTAMINATION

Non-fixed contamination on the external surfaces of any package is required to be kept as low as practicable and is not allowed to exceed the following limits, averaged over any area of 300 cm² of any part of the surface:

(a) Beta, gamma and low toxicity alpha emitters, 4 Bq/cm²;
(b) All other alpha emitters, 0.4 Bq/cm².
4. MAXIMUM RADIATION LEVELS

The radiation level at any point on the external surface of an excepted package is not allowed to exceed 5 μSv/h.

5. CATEGORIES OF PACKAGES AND OVERPACKS

Not applicable.

6. MARKING AND LABELLING

The package is required to be marked “RADIOACTIVE” on an internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package; or on the outside of the package, when it is impractical to mark an internal surface.

Packages, freight containers and overpacks containing materials having other dangerous properties (e.g. corrosiveness) are also required to be marked and labelled as required by the relevant transport regulations.

Each package is required to be marked with an identification of either the consignor or the consignee, or both.

All package markings are required to be legible and durable, and are required to be on the outside of the packaging.

Packages are required to bear the mark “UN 3507”.

Packages with a gross mass exceeding 50 kg are required to be marked with their permissible gross mass on the outside of the packaging.

It is the consignor’s responsibility to comply with the requirements of marking, labelling and placarding.
7. REQUIREMENTS BEFORE SHIPMENT

502, 503(a) Before each shipment of any package, the following requirements apply:

(i) For any package, it is required to ensure that all the requirements specified in the relevant provisions of the Regulations have been satisfied.

(ii) It is required to ensure that lifting attachments that do not meet the requirements of para. 608 of the Regulations have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with para. 609 of the Regulations.

546(a) The transport documents with each consignment (consignment notes) are required to include the identification of the consignor and consignee, including their names and addresses, and the UN number UN 3507.

8. PROVISIONS CONCERNING TRANSPORT OPERATIONS

8.1. Modal requirements

580 Transport by post is not permitted.

8.2. Placarding

507 Placards may be required for other dangerous properties of the contents, but not for the radioactive properties.

545 Consignor’s responsibilities.

8.3. Stowage during transport, storage in transit and segregation

Not applicable.
8.4. Damaged or leaking packages

Movement of packages that are damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport.

8.5. Decontamination

Not applicable.

8.6. Other provisions

In the event of non-compliance, appropriate actions are required to be taken as soon as possible, including communication and remedy.

Customs operations may be carried out only in a place where adequate means of controlling radiation exposure are provided.

Where a consignment is undeliverable, appropriate actions are required to be taken as soon as possible.
