Outline

- What is the global safety regime?
- Why should we consider changes to the regime?
- How should we change it?

What is the global safety regime?

- Fundamental obligation for safety rests with the operator.
- Rigorous oversight by a national regulatory entity.
- Overlay of international assistance

Why should we consider change?

Why should we consider change?

- Noteworthy safety events continue to occur.

Why should we consider change?

- Noteworthy safety events continue to occur.
- Every country hostage to safety performance elsewhere.

Why should we consider change?

- Noteworthy safety events continue to occur.
- Every country hostage to safety performance elsewhere.
- Changing structure of the marketplace.

Why should we consider change?

- Noteworthy safety events continue to occur.
- Every country hostage to safety performance elsewhere.
- Changing structure of the marketplace.
- Much to learn from each other.

How should we change the global
safety regime?

How should we change the global safety regime?

- Strengthen the network for communication of operating experience.

How should we change the global safety regime?

- Strengthen the network for communication of operating experience.
- Continue work on IAEA safety standards.

How should we change the global safety regime?

- Strengthen the network for communication of operating experience.
- Continue work on IAEA safety standards.
- Encourage safety culture.

How should we change the global safety regime?

- Strengthen the network for communication of operating experience.
- Continue work on IAEA safety standards.
- Encourage safety culture.
- Strengthen the Convention on Nuclear Safety.

How should we change the global safety regime?

- Strengthen the network for communication of operating experience.
- Continue work on IAEA safety standards.
- Encourage safety culture.
- Strengthen the Convention on Nuclear Safety.
- Establish multinational design review.
